Pred. No. is the score greater that and is derived	s the number of results predicted by chance to have a er than or equal to the score of the result being printed, ved by analysis of the total score distribution.

Polypeptides comprising immunogenic portions of prostate proteins - used in a vaccine for the treatment of prostate cancer claim 3; Page 104; 130pp; English.

The present sequence is a new DNA which encodes an immunogenic portion of a prostate tumour protein. The encoded immunogen, or the DNA itself, can be used as a vaccine for the treatment of prostate cancer. The DNA was identified by analysis of a subtracted cDNA library obtained by subtracting a prostate tumour cDNA expression library with a normal tissue cDNA library. | 06-7AN-1999 (first entry) | 06-7AN-1999 (first encer; tumour; vaccine; immunogen; clone; ss. Claim 1; Page 112; 141pp; English.

This sequence represents a human prostate tumour specific gene, and can be used in the method of the invention. The method is for detecting prostate cancer comprises contacting a biological sample with an agent able to bind an immunogenic portion of a prostate protein (such as encoded by this sequence). An antibody which binds to an immunogenic portion of the prostate protein, and the method can be used to detect, monitor progression of, or treat prostate cancers. The antibody may also be conjugated to a therapeutic agent for use in therapy of prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            576

Claim 10: Fig 1; 120pp; English.

Crodes for a putative serine protease. TI genes function

codes for a putative serine protease. TI genes function

in biochemical pathways involved in weight control and

related disorders. The products can be used for treating

weight disorders, e.g. obesity, cachexia or anorexia nervosa,

or a related disorder such as diabetes. The products can

c also be used to modulate cell cycle progression and apoptosis.

They can be used for treating neurodegenerative diseases

which are characterised by apoptosis, including Alzheimer's

disease, Parkinson's disease, Huntington's chorea, amylotrophic

clateral sclerosis or spinocerebellar degenerations. The

products can also be used for detection, diagnosis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               treatment

A host cell containing an expression vector comprising the HPSK nucleic acid sequence can be used to produce the protein recombinantly. The HPSK products can be used for the diagnosis of conditions or diseases associated with expression of HPSK such as prostate carcinoma and benign prostate

hyperplasia. Agonists and antagonists which specifically bind to HPSK and modulate its activity can be used for the preparation of treatment of such conditions or diseases. The products can also be used for detection and drug screening, especially for the detection of prostate-specific kallikrein (PSK).
                                                                                                                                                                                                                                  ö

Claim 1; Page 115; 141pp; English sequence represents a human prostate tumour specific gene, and can be used in the method of the invention. The method is for detecting prostate cancer comprises contacting a blological sample with an agent able to bind an immunogenic portion of a prostate protein (such as encoded by this sequence). An antibody which binds to an immunogenic

The present sequence is a new DNA which encodes an immunogenic portion of a prostate tumour protein. The encoded immunogen, or the DNA itself, can be used as a vaccine for the treatment of prostate cancer. The DNA was identified by analysis of a subtracted cDNA library obtained by subtracting a prostate tumour cDNA expression library with a normal tissue cDNA library with a normal

Novel human prostate specific tumour protein and fragments - useful

Tor detecting and treating prostate cancers

Claim 1; Page 113-114; 141pp; English.

This sequence represents a human prostate tumour specific gene, and can

be used in the method of the invention. The method is for detecting

prostate cancer comprises contacting a biological sample with an agent

able to bind an immunogenic portion of a prostate protein (such as

encoded by this sequence). An antibody which binds to an immunogenic

concoded by this sequence). An antibody which binds to an immunogenic

portion of the prostate protein, and the method can be used to detect,

monitor progression of, or treat prostate cancers. The antibody may

class be conjugated to a therapeutic agent for use in therapy of prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            may

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Polypeptides comprising immunogenic portions of prostate proteins - used in a vaccine for the treatment of prostate cancer claim 3; Page 105-106; 130pp. English.

The present sequence is a new DNA which encodes an immunogenic portion of a prostate tumour protein. The encoded immunogen, or the DNA itself, can be used as a vaccine for the treatment of prostate cancer. The DNA was identified by analysis of a subtracted cDNA library obtained by subtracting a prostate tumour cDNA expression library with a normal tissue cDNA library.

Novel human prostate specific tumour protein and fragments - useful for detecting and treating prostate cancers

Claim 1: Page 56, 141pp; English.

This isequence represents a human prostate tumour specific gene, and can be used in the method of the invention. The method is for detecting prostate cancer comprises contacting a blological sample with an agent able to bind an immunogenic portion of a prostate protein (such as encoded by this sequence). An antibody which binds to an immunogenic portion of the prostate protein, and the method can be used to detect, monitor progression of, or treat prostate cancers. The antibody may also be conjugated to a therapeutic agent for use in therapy of prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                             Polypeptides comprising immunogenic portions of prostate proteins - used in a vaccine for the treatment of prostate cancer claim 3, Page 33-54, 130pp; English.

The present sequence is a new DNA which encodes an immunogenic portion of a prostate tumour protein. The encoded immunogen, or the DNA itself, can be used as a vaccine for the treatment of prostate cancer. The DNA was identified by analysis of a subtracted cDNA library obtained by subtracting a prostate tumour cDNA expression library with a normal tissue cDNA library.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                217

WOVEL human prostate specific tumour protein and fragments - useful
for detecting and treating prostate cancers

Claim 1; Page 114; 141pp; English.

This sequence represents a human prostate tumour specific gene, and can
be used in the method of the invention. The method is for detecting

prostate cancer comprises contacting a biological sample with an agent
able to bind an immunogenic portion of a prostate protein (such as
encoded by this sequence). An antibody which binds to an immunogenic
portion of the prostate protein, and the method can be used to detect,
monitor progression of, or treat prostate cancers. The antibody may

Polypeptides comprising immunogenic portions of prostate proteins -
used in a vaccine for the treatment of prostate cancer.

Claim 3; Page 106; 130pp; English.

The present sequence is a new DNR which encodes an immunogenic portion
of a prostate tumour protein. The encoded immunogen, or the DNR itself,
can be used as a vaccine for the treatment of prostate cancer. The DNR
was identified by analysis of a subtracted cDNR library obtained by
subtracting a prostate tumour cDNR expression library with a normal
tissue cDNA library.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
for detecting and treating prostate cancers
Claim 1: Page 116-117: 141pp; English.

This sequence represents a human prostate tumour specific gene, and can be used in the method of the invention. The method is for detecting prostate cancer comprises contacting a biological sample with an agent able to bind an immunogenic portion of a prostate protein (such as encoded by this sequence). An antibody which binds to an immunogenic portion of the prostate protein, and the method can be used to detect, monitor progression of, or treat prostate cancers. The antibody may also be conjugated to a therapeutic agent for use in therapy of prostate
                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Polypeptides comprising immunogenic portions of prostate proteins - used in a vaccine for the treatment of prostate cancer claim 3; Page 108-109; 130pp; English.

The present sequence is a new DNA which encodes an immunogenic portion of a prostate tumour protein. The encoded immunogen, or the DNA itself, can be used as a vaccine for the treatment of prostate cancer. The DNA was identified by analysis of a subtracted cDNA library obtained by subtracting a prostate tumour cDNA expression library with a normal tissue cDNA library
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        172 atggtggaggccagcctctccgtacggcacccagagtacaacagacccttgctcgctaac 231

This sequence is encoded by a human prostate tumour specific gene, and can be used in the method of the invention. The method is for detecting prostate cancer comprises contacting a biological sample with an agent this protein sequence). An antibody which binds to an immunogenic portion of a prostate protein (such as portion of the prostate protein, and the method can be used to detect, monitor progression of, or treat prostate cancers. The antibody may also be conjugated to a therapeutic agent for use in therapy of prostate.

The sequence is that encoding the Tub Interactor protein (hTI-1) which is a putative serine protease. TI genes function (hTI-1) in blochemical pathways involved in weight control and related disorders. The products can be used for treating weight disorders. The products can a related disorders uch as diabetes. The products can also be used to modulate cell cycle progression and apoptosis. They can be used for treating neurodegenerative diseases which are characterised by apoptosis, including Alzheimer's disease, Parkinson's disease, Huntington's chorea, amylotrophic products can also be used for detection, diagnosis and

                                                                                     containing an expression vector comprising the HPSK nucleic acid sequence can be used to produce the protein recombinantly. The HPSK products can be used for the diagnosis of conditions or diseases associated with expression of HPSK such as prostate carcinoma and benign prostate with hyperplasia. Agonists and antagonists which specifically bind to HPSK and modulate its activity can be used for the preparation of treatment of such conditions or diseases. The products can also be used for detection kallikrein (PSK).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    for detecting and treating prostate cancers
Example 1: Page 115-116; 141pp; English.
This sequence is encoded by a human prostate tumour specific gene, and
can be used in the method of the invention. The method is for detecting
prostate cancer comprises contacting a biological sample with an agent
able to bind an immunogenic portion of a prostate protein (such as
this protein sequence). An antibody which binds to an immunogenic
portion of the prostate protein, and the method can be used to detect,
monitor progression of, or treat prostate cancers. The antibody may
also be conjugated to a therapeutic agent for use in therapy of prostate
                                                 hyperplasia
Claim 1; Fig 1A-C; 68pp; English.
This represents a human prostate-specific kallikrein (HPSK). A host cell

The present sequence is an immunogenic portion of a prostate tumour protein. The immunogen, or the DNA encoding it, can be used as a vaccine for the treatment of prostate cancer. The immunogen was isolated from a prostate tumour cDNA library obtained by subtracting a prostate tumour cDNA library with a normal tissue cDNA library.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleotide sequences encoding stratum corneum chymotryptic enzyme and related vectors, transformed cells and polypeptides, useful for treating skin disorders, e.g. acne or psoriasis, and for identification of specific inhibitors.

Disclosure: Page 97; 137pp; English.
The enzyme encoded by this sequence is used in pharmaceutical, cosmetic and skin care products, especially to treat and prevent acne, xeroderma, or other hyperkeratotic conditions (e.g. callosities or keratosis pilaris), ichthyoses, psoriasis, eczema, etc. It is produced recombinantly following mammal, insect, plant, or sequence 253 AA;
                                                                                                                                                                                                New isolated human amyloid precursor protein protease - used to develop prods. for the treatment or diagnosis of associated conditions, esp. Alzhaimer's disease

T conditions, esp. Alzhaimer's disease

Claim 1; Page 44-45; 55pp; English.

C Human amyloid precursor protein protease (W05383) is involved in the processing or clearance of amyloid precursor protein to form beta-amyloid peptide. Its amino acid sequence was deduced from a beta-amyloid peptide. Its amino acid sequence was deduced from a cDNA clone (T39783) obtd. from a human lung library. Recombinant protease can be produced in transformed or transfected prokaryotic portice. E. coli) or eukaryotic (partic. Av-120 host cells. It is used to develop products for the design and testing of cpds. useful for treating or preventing conditions associated with beta-amyloid peptide, esp. Alzheimer's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    62 AN-G-RMPTVLQCVNVSVVSEEVCSKLYDPLYHPSWFCAGGGQXQXDSCNGDSGGPLICN 119

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   for the recombinant production of protease M. Probes and antibodies, based on the protease M gene and its protein product, are useful for detection of Protease M in a sample. Nucleic acids encoding protease M, antisense constructs, or antibodies against protease M are useful for modulating the protease M serine proteinase activity associated with a cell. In particular the modulators stimulate the protease M cysteine proteinase activity or inhibit the serine proteinase activity. The modulators are useful for inhibiting the development or progression of metastatic phenotype in a (mammary) tumour cell. The modulators can be identified by methods measuring the rate of cleavage of protease M in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the presence of a serine protease substrate and a test substance, or by measuring the level of expression of protease M mRNA in the presence of a test substance. The present sequence represents human protease M.

                                                                                                           Amyloid precursor protein-cleaving protease - associated with Alzhehaer's disease and Down's syndrome Claim 1; Page 11-12; 14pp; English.
The sequence is that of Zyme, an amyloid precursor protein-cleaving protease. It cleaves APP to generate amyloidgenic fragments of the size expected of a Met596-Asp597 cleavage. It is thus very useful in furthering the characterisation of Alzheimer's disease and
